IT5007 Tutorial-3: Read Me Instructions

Purpose:
The Train Ticket Booking System website allows an easy way for customer-facing staff at Singapore High-Speed Intercontinental Railway to book train tickets for passengers at the front-desk or over the phone.

Instructions:
To execute the code, user will need to download the zip file, open the terminal to the main folder, and run the following commands:
- "**npm run watch**"
- Then open a second terminal, and run "**npm start**"

Afterwards, the staff should be able to access the website, where they can help travellers to book tickets, delete tickets, display ticket information in a list, and display free seats in a graphical format.
